

## SUMMARY OF LAND DISTURBANCE PERMIT REQUIREMENTS

- You must install a construction entrance before doing any digging, and maintain it until the project is finished
- You must install controls (silt fences, check dams, settling basins etc.) to prevent any sediment from leaving your site, and maintain these controls until the site is completely stabilized
- You must remove any sediment that is tracked onto the roadway no later than the end of the day
- You must provide an area for concrete truck wash down on your site
- You must stabilize your site after construction is complete
- You must inspect your controls at least every two weeks, and after a rainfall of ½" or greater (these inspections must be documented on the provided forms)

*NOTE It is the permit holders responsibility to make sure his/her subcontractors follow these rules*
